Brightlearn TV Analysis
Received Raw Data fromBrightlearn Team
Data is in CSV format form
Review Data while its still on
Before the data is created on Databricks needs to be in readable format
2. To upload user profiles
Analyses of code to see which columns we have and which ones need to be changed
-Indentify which channels are most watched and see the unique users
JOIN TABLES USING USERID
1.Default (which already exits)
Use SQL to check the data integrity, to querry the informations
Use FULL JOIN TO JOIN THE TABLES
2.Create a schema
Key insights on the database
Analysis /presentation
-Presentation will be in Powerpoint
-It is based on the people consumption,
-Focus on the age group
-Analysis on when people watch
To upload data into Databricks,
3.Create a table(upload)
I am going to use Google Looker for data visualisation
Compare user viewership,uniquus ers, Viewership trends. My data will be more focused on JOINED DATABASE results
-Show which demographics watch the TV mostly
-I will also analyse the audience view
-Look at the behaviour views
-Day time split
Text
1. Seperate the two tables, uplaod viewership table first and analyse it
- Run a code to show all data Create new columns that wil help analyse the data
-Transform channel2 & RecordDate were transformed into SAST Ffrom UTC time, including days of the week, time categories
JOIN TABLES USING USERID
